Revised SEPTEMBER 1966

LIST OF CHEMICAL COMPOUNDS AUTHORIZED FOR USE UNDER U. S. D. A. POULTRY,
MEAT, RABBIT AND EGG PRODUCTS INSPECTION PROGRAMS

This publication lists chemical compounds authorized by the Technical Services Division, Consumer and Marketing Service for use in plants operating under the U. S. Department of Agriculture Poultry, Meat, Rabbit and Egg Products Inspection Programs.

*** THIS LIST IS COMPLETE AS OF JULY 1, 1966 ***

Procedure for Obtaining Compound Authorization

The manufacturer shall submit the following information on all chemical compounds proposed for use in official poultry, meat, rabbit and egg processing plants to: Laboratory Branch, Technical Services Division, Consumer and Marketing Service, U. S. Department of Agriculture, Box 348, Beltsville, Maryland 20705.

1. The complete name of each compound submitted.
2. A certification from the company stating that the compound, as it is proposed for use in the official plant, will not deleteriously affect the poultry, meat, rabbit and egg products. This certification shall include the conditions under which this compound is believed to be satisfactory for use and any available technical information related to safety and efficacy which might aid in evaluating the compound and any precautions necessary.
3. The complete chemical formula for each compound, listing the identification of all components by their complete chemical name on a percentage basis, including the limits of any percentage variation which may occur.
4. One descriptive label for each product.
5. One 4-6 ounce sample of each compound.
6. A copy of any authorization for use issued by another Federal agency. For example, if the product is a pesticide or a sanitizer, a copy of the authorization letter or registration number from the Pesticide Regulation Division of the U. S. D. A., Washington, D. C. 20250, should be submitted.
7. When the manufacturer and distributor are not the same, the distributor shall submit the following items in addition to the information required from the manufacturer:
 - a. A letter stating that they are authorized distributors of the compound.
 - b. One descriptive label for the compound.
 - c. One 4-6 ounce sample of the compound.

Any change in the above information voids the authorization unless new information is submitted for review prior to change.

This publication lists compounds authorized for use in official poultry, meat, rabbit and egg processing establishments. The permissible use for each compound is shown by code letters, and conditions for use are restricted by the category in which it is placed.

Code letters and their meanings:

- A. Compounds for use as general cleaning agents, or for use with steam cleaning or recirculating devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water.

- B. Compounds for use only with steam cleaners or with recirculating devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

- C. Acid cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

- D. Floor and wall cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

- E. Scouring cleaners.

Residues resulting from the use of scouring cleaners must be carefully removed from equipment and utensils by thorough rinsing with potable water.

- F. Sanitizers and sanitizing cleaners.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

- G. Water conditioners.

Compounds listed in this category are to be used in accordance with the conditions set forth in the letter of acceptance.

H. Shell-egg cleaning compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

I. Shell-egg destaining compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

J. Shell-egg sanitizing compounds.

Eggs that have been treated with these compounds shall be subjected to a thorough potable water rinse only if they are to be immediately broken for use in the manufacture of egg products.

K. Shell-egg sanitizing compounds

Eggs that have been treated with these compounds may be broken for use in the manufacture of egg products without a prior potable water rinse.

L. Wetting agents for use in poultry scald vats.

Compounds may be used in scald vats up to a maximum concentration of one percent.

M. Boiler treatment compounds.

Steam from boiler water treated with these compounds is allowed to contact edible products.

N. Compounds for treating steam lines and closed cooling systems.

Steam or water from lines treated with these compounds is not permitted to contact edible products.

O. Compounds for use in sewage and drain lines only.

P. Compounds for use in toilets and dressing rooms only.

Q. Liquid hand soaps.

The hand soaps must be dispensed from adequate dispensers located on a wall away from the processing line. After the use of the soap, the hands must be thoroughly rinsed with potable water.

R. Compounds for use in offal rooms and plant exteriors only.

Permission for the use of these compounds on loading docks and similar areas is left to the discretion of the inspectors in charge of the plants.

S. Pesticides for use in all departments.

Before using these pesticide compounds, exposed food products and packaging materials must be removed from the room or protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

T. Pesticides for use in inedible products areas only.

These products must be used in a manner that precludes their entry into edible product areas through open windows, ventilating systems, etc.

U. Pesticides for controlled use only.

These products may be used in official plants under conditions which absolutely preclude any direct or indirect contact with edible products. Use shall be permitted only when operations have ceased. The inspector-in-charge shall be notified of each location where such compound is placed and shall see that it is removed prior to the resumption of operations.

Washing and ventilation necessary to remove pesticide residues resulting from operations such as fogging, fumigating or dusting shall be completed prior to returning edible product to treated areas and resuming operations.

V. Compounds for washing fruits and vegetables that are to become ingredients of poultry, meat, rabbit and egg products.

After using these compounds, the products must be thoroughly rinsed with potable water.

W. Hand creams.

The use of hand creams or lotions is limited to toilets and dressing rooms and for application only when users are leaving the plant.

X. Hog scald media.

Y. Tripe denuding agents.

Treatment must be followed by thorough rinsing with potable water to remove added substances.

Z. Decharacterizing Inks.

Compounds listed in this category are to be used in accordance with the conditions set forth in the letter of acceptance.

The purpose of this publication is to enable each inspector-in-charge to provide continual assurance that all compounds used in the official plant have been authorized for use by the Technical Services Division and are used properly, thus protecting edible products from adulteration. Questions concerning authorization, changes in formulation, etc. should be referred to the Laboratory Branch at the address shown on page three.

The final granting of authorization to use lubricants, paints, and coatings which do not come in direct or indirect contact with edible products or packaging materials is the responsibility of the inspector-in-charge of the official poultry processing plant. Technical assistance will be provided by the Laboratory Branch upon request.

The Technical Services Division accepts water used in official establishments as being potable when such certifications are made by State Health Agency Authorities.

* * * * *

A partial listing of compounds acceptable for use in official meat processing plants is included in this revision. Such compounds are indicated by an asterisk (*) preceding the listing. Use of compounds in official meat processing plants is not limited to those listed in this publication. All compounds for which previous acceptance from the Meat Inspection Division has been granted may be used providing no changes have been made since the acceptance was granted.

Labels of pesticides and most other compounds contain adequate directions for safe use. These directions should be carefully followed at all times, and all necessary precautions taken.

QUALITY CONTROL can be described as the result of a total of factors which include proper selection of raw materials, careful handling, judicious processing, adequate packaging, and effective, consistent sanitation. Proper sanitation is as fully important as the latest in modern equipment.

Flies, roaches, dirty equipment, dirty utensils, piles of trash, strong odors, or accumulations of grease, all indicate unsanitary procedures. Unless the equipment or utensils are given a good cleaning, chemical disinfectants or sanitizers are not adequately effective. Their use is of little value in the presence of excess organic matter.

Detergents are mixtures of chemicals that change the characteristics of dirt and soil so that they can be separated from the surface of equipment with a solvent, usually water.

ALKALINE DETERGENTS will condition the water, penetrate and wet the soil, disperse and emulsify the soil so it can be washed away. The common ones are:

- sodium carbonate
- sodium hexametaphosphate
- sodium hydroxide
- sodium metasilicate
- sodium or potassium soaps
- tetrasodium pyrophosphate
- trisodium phosphate

ACID DETERGENTS are used primarily for removing scale formed from hard water precipitates. These are:

- mineral acids
- organic acids

SANITIZERS are chemicals which act as bactericides or fungicides to kill bacteria and fungi remaining on the surface after cleaning. These include:

- chlorine
- hydrogen peroxide
- iodine
- quaternary ammonium compounds

These cleaning compounds can be applied with brushes, spray cleaners, steam cleaners, and recirculating or pressure cleaners.
